

# SREC Resources & Cummins-Onan

- *providing quality power solutions for your family and home*

**Neighbor-friendly operation** – specifically designed with quiet operation in mind. Less than 61 dB(A) at 23' under full load.

**Simplified installation** – the generator comes with an innovative polymer base eliminating the need for a concrete pad.

**Fully automatic operation** – when used with our RSS automatic transfer panel.

**Automatic load management** – works with the RSS automatic transfer panel to maximize utilization of the generator by turning off loads you identify as non-essential.

**Fuel flexibility** – runs on either natural gas or propane – readily available, clean and environmentally friendly fuels.

**In-home display** of service and maintenance information is standard on an attractive LED unit.

**Innovative aluminum housing** makes maintenance a breeze and features a locking cabinet for extra security.

**Internet remote monitoring** and e-mail notification of generator operation and status available (optional).

**Generator designed and manufactured in the USA.**

**Powerful load starting** – able to start and run a 4 ton A/C unit at 122° F and full pre-load.

**Compact footprint** – length 48", width 34", height 31.5"

Life goes on  
even when the  
power goes out.

## Insulate yourself from the ravages of nature

Electricity is such an integral part of our everyday lives that we take it for granted. Flip a switch or plug in an appliance and we assume the power will be there at our beck and call. For the most part, it is. The reliability of the electric systems in the United States is amazing when you consider all that they are exposed to day in and day out. Between Mother Nature and humans, the electric systems receive substantial abuse on a regular basis.

Excellent reliability notwithstanding, outages and interruptions are inevitable. The consequences of these events can range from the annoyance of a flashing digital clock to the challenge of coping with an extended outage. For some people, a change in the daily routine is all that is necessary to adapt to an outage that spans one or more days. At worst, they might experience food spoilage and cold showers.

For others, an extended outage is far more critical. Individuals with home based businesses, those with electrically powered medical devices, those with substantial investments in food and those who simply want the assurance of an uninterrupted power supply are all candidates for a back-up generator.

Unfortunately, waiting for an emergency event to invest in a generator is a recipe for trouble. To obtain the maximum benefit and satisfaction from a generator investment requires planning. You need to identify the loads you want to back up and then buy a generator with enough capacity to handle them. It isn't rocket science but it takes time; a commodity you may not have in a weather emergency.

## Generators the SREC Resources Way

There is more to generators than meets the eye. It involves a fair amount of effort to size and select the generator that is right for you. While not an impossible task, you may prefer to have help in the process. SREC Resources has the requisite knowledge to make your generator purchase a pleasant and successful experience. We can aid in the sizing, selection and installation of the perfect generator for your specific needs. Contact us today for help in picking the perfect generator for your needs.

## Commercial Grade Power for Your Home

Our line of Cummins-Onan residential generators are designed and manufactured in the United States. They feature utility-grade power with a total harmonic distortion output of less than 5%. Their powerful engines married with the Cummins-Onan fuel systems, generator and controls insure the highest possible quality and reliability. Self-diagnostics and automatic exercise mean that your generator will run when you need it, every time. And, Cummins-Onan residential generators range in size from 13kW – 100kW.

## A Special Offer from SREC Resources.

### RS13 propane/natural gas generator - \$11,500 Installed.

Installation includes:

- ✓ Job site inspection by our on-staff Supervisor of Electrical Services;
- ✓ Local delivery and installation of the Cummins-Onan RS13 residential generator;
- ✓ A 200-amp automatic transfer switch with built-in 7-day exerciser clock and battery charger;
