ANSWERS: video games, phone charging, lights, cooking, laundry

Electricity is dangerous if not used safely.

Help Pluggy find the electrical hazards by completing the activity below!

Instructions:

Mark the four electrical hazards shown below with a "⊘". Use the safety tips to identify the hazards. Share these tips with your family and friends, and remember to always play it safe near electricity!

Electrical Safety Tips:

- Do not overload electrical outlets. Overloaded outlets are a fire hazard!
- Keep liquids and drinks away from all electronics, like TVs, computers and gaming consoles. If the liquids spill, they could cause shock or fire!
- Never place items like clothing or toys on top of a lamp! Leaving flammable items near lightbulbs creates a fire hazard.
- Never leave electrical cords in an area where people walk! The exposed cord creates a tripping hazard.
